RE: EPA Toxic Substance Control Act (TSCA) Title VI Compliance

11/01/19

Dear Valued Customer:

The EPA established TSCA Title VI, Formaldehyde Standards for Composite Wood Products, in order to reduce the exposure of humans to formaldehyde gas across the United States. These Standards are consistent with the requirements and emission levels that were already in place by the California Air Resource Board's Airborne Toxic Control Measure (CARB) Phase 2 for products that were sold in California. Essentially the EPA took the CARB Phase 2 legislation to a national level.

Products manufactured by Bay View are in compliance with the existing CARB Phase 2 requirements. Thus, the products Bay View provides today are also compliant with the new EPA TSCA Title VI regulations.

Our commitment to providing safe and high quality products begins with our suppliers of particleboard and medium density fiberboard (MDF). These products are Third Party Certified by the Composite Panel Association (CPA) to be in compliance with the EPA TSCA Title VI requirements. In addition, we work with top laminate manufacturers who are Greenguard Certified for Indoor Air Quality. These standards ensure that you are purchasing a safe and quality product with low emissions.

Thank you for your business and best regards,
